THE BED OF THE OCEAN.

Even the sea has few privacies, except in the middle of the expanse, far from One by one they are admitted to the sight and pre-ence of man, through the mediumship of the divers. One of the most famous of these divers, speaking of what he has seen near the "Silver Banks" of Havti, say that the banks of the coral on which his divings were made are about forty miles in length, and about ten to twenty in breadth. On this bank of coral is presented to the diver one of the most beautiful and sublime scenes the eye ever beheld. The water varies from ten to one hundred feet in depth, and is so clear that the diver can see from two to three hundred feet, when he is submerged, with but little obstruction to the eight. He says that the bottom of the ocean, in many places, is as smooth as a murble floor; while in others it is studded with coral columns from ten to one hundred feet in height and from one to eighty feet in diameter. The tops of those more lofty support a myriad of pyramidal pendants, each forming a myriad more; giving reality to the imaginary abode of some water-nymph. In other places the pendants form arch after arch; and as the diverstands on the bottom of the ocean, and gazes through these in the deep winding avenue, he finds that they fill him with as sacred an awe as if he were in some old cathedral which had been long buried beneath "old ocean's wave." Here and there the coral extends even to the surface of the water, as if those loftier columns were towers belonging to those stately temples that are now in ruin. He says there were absolutely countless vaireties of dininutive treeshrub and plants, in every crevice of the corals where the water had deposited the least earth. They were all of a faint hue, owing to the pale light they received, although of every shade, and entirely different from plants he was familiar with that vegetate upon dry land. One in particular attracted his attention. It resembled a sea fan of immense size, of variegated colors, and the most brilliant hue. The fish which inhabited those "Silver Banks" he found as different in kind as the scenery was varied. They were of all forms, colors and size -- from the symmetrical goby to the globe-like sun-fish; from those of the dullest hue to

The death is recorded of the "fattest woman in the world," a member and special curi sity of Nathan's Cleveland Circus in America, who appears to have been smothered in her bed. Miss Conley, though the most enormous of her sex, weighing as she did 497 pound-, fell far short of that prodigy of human bulk, the famous Daniel Lambert, who died in 1809, during the Stamford Fair, at the age of forty. Lambert weighed no less than 52 stone 11 pounds, that is 739 pounds, or close upon half as much again as the American lady. Daniel Lambert's coffin with his body could not be brought down the stairs of the house in which he die I, and the wall at the sides of the window had to be broken away to provide an exit. He was 5 feet 11 inches in height, measured 9 feet 4 inches round the body, and 3 feet 1 inch round the leg. He never drank any beverage but water, and lept le s than eight hours per day .- [Manchester Weekly Times, August 11th.

THE REVOLVING MULE.

John Phon x's investion Still on

BY VIRTUE OF AN EXECUTION ISSUED at of the Sixth fair is it instructed countries and a veteran army officer to the American correspondent, "those fellows up at the Navy Department were in quite a huff over an effort looking into a change in their uniforms, and there was a great a commotion as the one that existed during President Pierce's administration, when they talked of changing the style of uniforms and the army. That event was attended by some very amusing incidents, but the most laughable was the part taken in it by the late Capitain Deslay or lobe Physics as he was known. Derby, or John Phonix, as he was known in journalistic and literary circles. He was a lieutenant at the time and stati med in California. Jeff. Davis, who was Sec retary of War, issued a general invitation to officers of the army who were skillful draughtsmen to send in auggestions for the new uniform which it had been decided to adopt. One such invitation was sent to each officer. Lieutenant Derby was very ready with his pen-a really ingennious artist. In reply, he sent the War Department, not exactly a design for a new uniform, but a peculiar addition to the old uniform, the amendment consisting merely of a ring attached to the seat of the trousers of each private sol dier. Each officer was to carry, instead

of a sword, a long pole with a hook on the end, like a shepherd's crook. The pole and ring was to enable officers to keep privates from running away in bat-Fugitives could easily be caught by it and brought back, and stragglers could be kept in line. Moreover, the ring would be very useful in the cavalry service to fasten soldiers in the saddle, to prevent them from falling off, and in the artillery service the rings were to be used for draught purposes, in the absence of mules. These specifications were accompanied by the most grotesque pict ures, representing officers hanling back cowardly recruits by the serviceable ring, cavalry recurely fastened to the tops of their steeds by the same device, and artillerymen harne sed to cannon, drawing them through narrow defiles or up accliv-

gaudy colors of 'Derby's Rotary Mule Howitzer, accompanied by a written inscription to this effect: 'Upon the back of a young and vigilant Mule strap a mountain howitzer, the muzzle pointing towards the tail. A similar piece of ordinence is fastened with iron bands under the animal's abdomen, the muzzle aimed between his forelegs to the front There are four gunners-two to each piece-and a 'persuader,' as he is called. whose business it is to persuade the mule to stand firm and not retreat, by stuffing the changeable dolphin; from the spots him with cats, after each discharge, with

ities inaccessible to mules. On another

sheet of cardboard was an illustration in

tin sausage stuffer. When Indians or other legitimate game appear in view, the mule is, by a crank movement on the tail, brought to the front. It don't make any difference which way the mule faces -- and here is where the point comes inone gun is always pointing toward the front. At the command, 'Fire!' the to howitzer is discharged. The recoil

throws the mule on its back, bringing the other gun into position. This being discharged, the mule is suddenly thrown on his feet again, when the gunners swab out the mule's throat with hay and reload.""

"The illustrations which accompanied these directions-in brown, red, blue and gold, and still on file in the War Depart ment -represented the rotary mule in seven different attitudes, looking con tente I and happy all the time. This was felt to be outrageous audacity on the part of a subaltern. The clerks in the War Department laughal in no lerately at the funny letter, but their superiors looked serious. Jefferson Davis, the Secretary, was terribly indignant, and he resolved to defend his wounded dignity. Charge and specifications were drawn up Charge and specifications were drawn up against Lieutenant Derby, and the officers were actually named for his courtmartial, when William L. Marcy. Secretary of State—a man of considerable sense and self-poise—said to the Secretary of War: 'Now, see here, General Davis don't you do it. This Derby has Davis, don't you do it. This Derby has undoubtedly a superfluous development of humor, but he is shrewd and ingen us and really a fine draughtsman. He has valuable qualities. You can organize a court that will convict him, but you will

the crook-and-ring and the rotary mule, and say nothing. And he did it. Poor Derby subsequently became

an inmate of an insane asylum and later died by suicide."
